WEATHER OF CONCERN

Weather of Concern

- Use this period of dry weather, lasting through early this week, to prepare for another bout of wet weather forecast to return to Northern California and parts of Southern California by mid next week.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

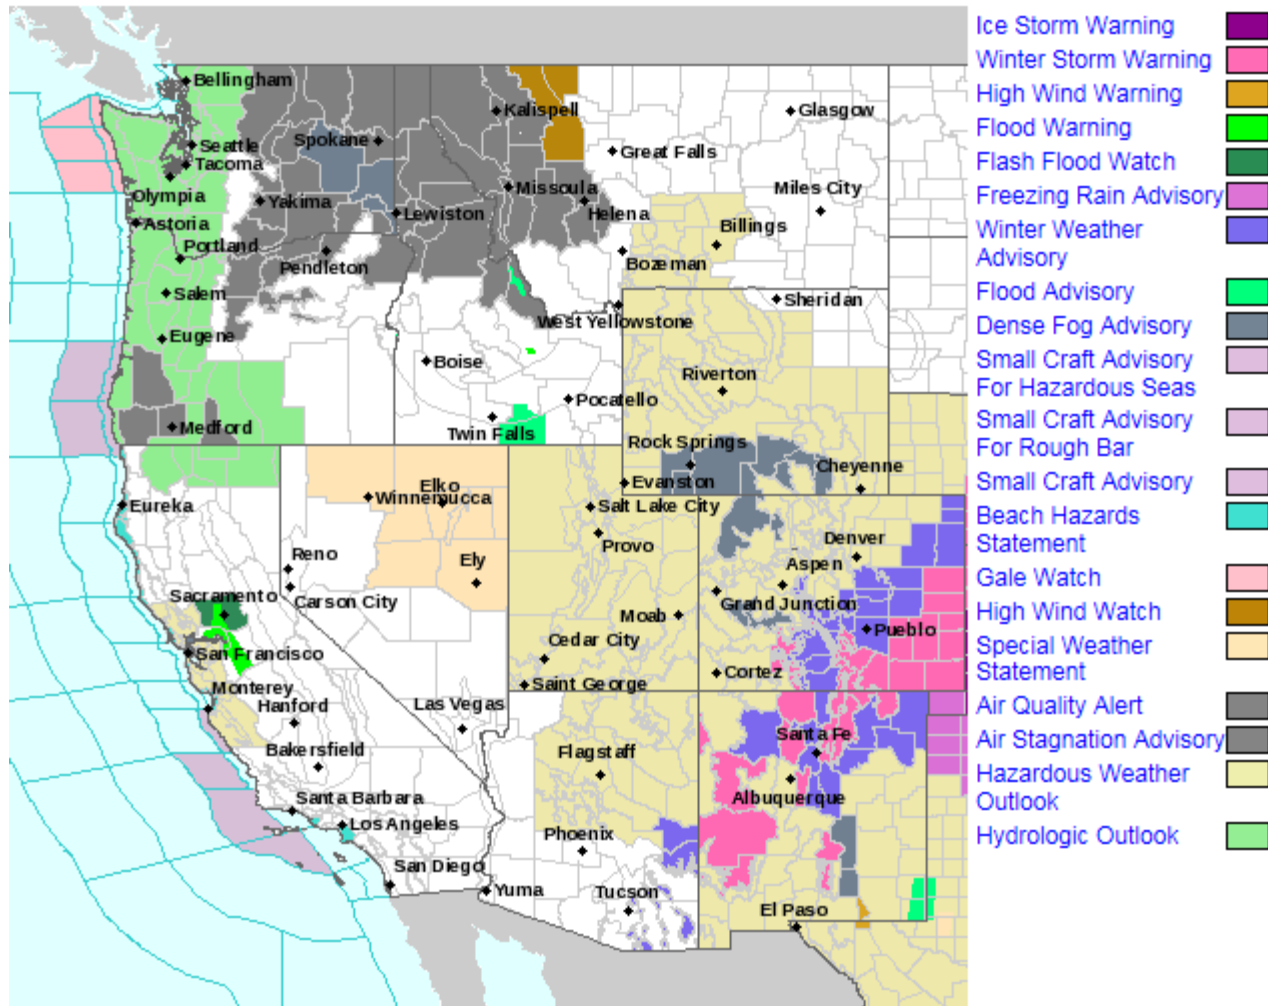

A weak disturbance aloft moving over the North Coast has been generating bountiful mid and high level clouds, but no rain. This feature will shift south and dampen out this morning. Ridging aloft will then rebuild by this this afternoon and hold through Monday. The Sacramento Valley is once again starting to see some reduced visibilities as low clouds and patchy fog develop. Fog will likely become more dense as the morning get closer to sunrise. Fog is expected to impact the valley for the next several mornings. Visibilities can quickly change along roadways. Another day of dry weather as daytime highs are in the 50s for the valley, mid 30s to upper 40s across higher terrain. The dry pattern will continue into Tuesday. Active wet weather is forecast to start early Wednesday and continue into the weekend

SOUTHERN CALIFORNIA

A large area of high clouds is off the coast, but it looks like most of these clouds will produce horizontally moving air more to the south than the east. The skies over the Central Coast will be mostly cloudy in the morning as the cloud train passes by, but for the most part it will be party cloudy today. There will be some morning low clouds over the LA coast as the marine layer starts to reform. The interior valley of San Luis Obispo County will see some low clouds as they spill in from the San Joaquin Valley. Gradients are trending onshore at the moment and the weaker offshore flow will result in cooling across the coasts and valleys.
